

# MILMEGA Ltd presented with Queen's Award for Innovation 2012

Ryde, Isle of Wight, UK – October 3, 2012

MILMEGA Ltd, was presented with the Queen's Award for Enterprise in Innovation for developing amplifiers, based on a novel design methodology, using gallium nitride-based transistor technology, which has brought the Company significant, global, commercial success.

Her majesty's Lord Lieutenant Major General Martin White CB CBE JP presented the Award to the Company on behalf of Her Majesty The Queen at a ceremony held at the Priory Bay Hotel in Seaview on Friday 28th September.

The ceremony was attended by the Company's staff and partners as well as local suppliers together with dignitaries from the Isle of Wight including John Owen, Chairman of the Chamber of Commerce, Steve Beynon, Chief Executive of the Isle of Wight Council, Susan Scoccia, Chairman of the Isle of Wight Council and David Woodward, Mayor of Ryde.

Graeme Goodall, MILMEGA's FD received a crystal bowl engraved with the Queens Award emblem on behalf of the Company's staff together with a ceremonial Grant of Appointment and thanked both those who work at MILMEGA and with MILMEGA for their contributions to this achievement.

Graeme Goodall, FD said "The Award says a lot about the skills and abilities of those who work at and with MILMEGA in achieving sustained global success in the design and manufacture of highly innovative, market leading, amplifier products. I am also pleased that this Award recognises and promotes, not only our innovative designs but also the values of quality and customer service that are important to us as a Company."

The prestigious Queen's Award for Innovation is awarded to businesses in the UK to recognise outstanding innovative achievements relative to their operational size. To win the Award, MILMEGA Ltd was required to demonstrate continuous innovation and development over a period of five years resulting in substantial improvement in the performance of the Company. In addition the Award is only made to organisations that can demonstrate a high level of corporate responsibility.

MILMEGA Ltd is a specialist designer and manufacturer of high power, solid state broadband RF and microwave amplifiers. The Company's 25-year history is supported by a strong reputation for the quality and technical innovation of its products.

MILMEGA's products are used throughout the world in EMC testing, defence, communications and high-energy physics. The proliferation of electronic systems in products such as cars, mobiles, notebooks, televisions, medical equipment, aircraft and other products has led to increasingly serious problems with electromagnetic interference. EMC testing evaluates the susceptibility of electronic products to electromagnetic emissions by irradiating them with signals generated by high-powered amplifiers. Manufacturers, therefore, test these electronic products for electromagnetic compatibility and susceptibility using broadband high power amplifiers.

Established in 1987, MILMEGA Ltd employs 31 design, manufacturing and support staff at its factory in Ryde, Isle of Wight. Following a MBO in 2004 the Company has grown significantly by investing heavily in new product design and by expanding its overseas markets most notably in the Far East.

The Company was acquired in January 2012 by Teseq Ltd, a UK subsidiary of Teseq Holding AG a large global EMC group based in Switzerland.
